

# DECORATING CHEAT SHEET

## KITCHEN BAR STOOL HEIGHTS

One of the biggest mistakes I see in kitchens is people buying the wrong height stools for their breakfast bar or bench. Follow this guide to choose the right height bar stools.

### CALCULATE THE CORRECT HEIGHT

(A) Measure the height of your counter or bench

(B) Subtract 25-30cm to allow enough room for you to sit comfortably under the bench

(C) The result is the desirable seat height of your bar stool

(A) 90cm - (B) 30cm = (C) 60cm

My Measurements:

(A) Bench Height \_\_\_\_\_

(B) Gap \_\_\_\_\_

(C) Seat Height \_\_\_\_\_

When you go shopping for bar stools, take this measurement with you.
